* Capacitor impedance Z is measured at frequency 100 kHz for capacitors CR \leq 1 000 μ F, and at frequency 10 kHz for capacitors CR > 1 000 μ F

Ripple current effective value versus temperature and frequency can be found from the formula $I_{RO} = I_R \times K_T \times K_F$, where

I_{R-} – allowable ripple current at 85 °C, 50 Hz (See Table “Capacitor electric parameters”)
